RSA Application: Third-Party Services

Scope

This inventory lists the third-party services used by the RSA application and explains the role each service plays in the app.

Active or directly wired services

Service	What it does in the application	Status / evidence	Payment range coverage	Amount
Firebase Authentication	Handles user sign-in, sign-out, session validation, role access, and Firebase-based password resets.	Active through `js/firebase-config.js` and `js/auth.js`.	Covered under the Firebase Blaze Plan through April 2027	
Cloud Firestore	Stores and synchronizes users, applications, document metadata, roles, settings, reports, chat data, and workflow state.	Active through the Firebase SDK and dashboard modules.	Covered under the Firebase Blaze Plan through April 2027	**$480/year ($40/month)** — combined Blaze Plan covering Authentication, Cloud Firestore, FCM, and Analytics
Firebase Cloud Messaging (FCM)	Registers browser push tokens and displays foreground/background notifications for chat and application events.	Active when the browser supports notifications and the user grants permission.	Covered under the Firebase Blaze Plan through April 2027	
Firebase Analytics	Collects application analytics when supported.	Enabled only outside local development/file mode and when browser support is available.	Covered under the Firebase Blaze Plan through April 2027	
Render (`rsa-email-api.onrender.com`)	Hosts the backend API used for account verification, administrative actions, document-upload proxying, push registration, and email-related endpoints.	Directly configured in `js/email-api-config.js`, `js/admin-api-config.js`, and `js/backblaze-storage.js`.	One-year coverage; renewable October 2027	**$300/year — Yet to be paid**
Backblaze B2	Stores up to **500 GB** of uploaded RSA documents and provides document download URLs.	Active through the Render upload proxy and `js/backblaze-storage.js`.	500 GB storage; payment coverage through January 2029	Amount not provided
Paystack	Provides Nigerian bank lists and verifies bank account names during agent/customer registration workflows.	Active through the Render backend; the browser calls `/api/paystack/banks` and `/api/paystack/resolve-account`.	Account verification; free for now	**Free for now**
EmailJS	Sends application notification emails and scheduled report emails.	Direct REST calls exist in `js/email-alerts.js` and `render-email-api/server.js`. Requires valid EmailJS configuration.	2,000 email messages per month; payment coverage through April 2027	**$108/year + $8.01 VAT**
WhatsApp	Opens WhatsApp conversations from phone-number links in the dashboards.	Used only when a user clicks a generated WhatsApp link; there is no WhatsApp API integration.	Contact messaging; free for now	**Free for now**

Service	What it does in the application	Status / evidence	Payment range coverage	Amount
Hostinger Domain	Provides the RSA application domain registration.	Added as the application domain provider.	Domain coverage from April 14, 2026 to April 14, 2028	**■61,800 for 2 years**
Hostinger Hosting	Hosts the RSA application website and related files.	Added as the application hosting provider.	Hosting coverage through April 14, 2030	**■475,200 for 4 years**

External libraries and delivery networks

These providers deliver frontend libraries or fonts rather than business data services:

Provider	Libraries/assets used
Google Fonts	Inter font
Cloudflare cdnjs	Font Awesome, jsPDF, PDF.js, html2canvas, jsPDF AutoTable
jsDelivr	DOMPurify, ExcelJS, PizZip, SheetJS
unpkg	pdf-lib and fontkit
Google `gstatic.com`	Firebase browser SDK modules

Main service flow

```
RSA dashboards
    |
    +--> Firebase Authentication / Firestore / FCM / Analytics
    |
    +--> Render backend API
              |
              +--> Backblaze B2 document storage
              +--> Paystack bank/account verification
              +--> EmailJS email delivery
```
